This list will be updated as new eligible products enter the local market. If you have any questions about the FlushStar® list, please call (206) 684-4150. Please note that Pressure Assist toilets may be louder than other models.

Why FlushStar® Toilets?

FlushStar® toilets contain internal parts and designs that are less likely to result in excessive water use over time, along with a reduced likelihood for clogging or the need to double-flush. Many other toilets on the market, not on the FlushStar® list, may provide satisfactory flushing performance for customers. However, products not on the list are more likely to need occasional double-flushing and/or they are sold in such a way that, under normal maintenance, they may use more water.

The FlushStar® list combines information from two sources: The LADWP SPS and the MaP testing. Products meeting the minimum recommended "standards" from both of these two sources are eligible for the FlushStar® list. Visit www.savinewater.org for more details.
