

Notice a Leak? Report it!

Detecting leaks is one of the most effective actions you can take to prevent water waste.

Report leaks in your apartment to your property manager immediately.

HOW TO REPORT:

? DID YOU KNOW?

Running toilets can use more water than taking 15 showers a day.

Water flows from the tank to the bowl without flushing

Running toilets are usually caused by water leaking from the tank to the bowl through the flapper (a rubber valve at the bottom of the tank).

Toilets are the top source of leaks in homes.

Learn the signs of a running toilet:

- ✓ You hear or you see your toilet tank refilling constantly or between flushes.
- ✓ You need to jiggle the handle to stop the toilet water from running.
